AirPod, maybe this time we are: the car of the future made in Sardinia on the market by summer

THEMES: [AirPod](#) [AirMobility](#)

19 FEBRUARY 2018

This was announced by the company that produces the innovative compressed air medium.

By the summer AirPod, the car of the future, which **works with compressed air, does not pollute and does not consume, will be on the market.** As reported by the newspaper La Nuova Sardegna, they were the heads of AirMobility, the Sardinian company also co-financed by the regional council led by Cappellacci, who acquired the production rights from the French parent company, with its registered office in Luxembourg, MDI.

AirPod is presented as a completely innovative means. Emissions equal to zero, no energy costs. A revolution. But in reality it should have seen the light for quite a while ', only so far of AirPod around have not seen, except for some prototypes.

But this time we are here, they are assured by AirMobility. **The factory in which the cars will be assembled is preparing to be fully operational.** Some bureaucratic details, such as the homologation of the car, **are missing due to the amalgamation of the company's top management.** But according to AirMobility reassurances it should only be a matter of time.

The official launch should take place in July in Luxembourg and simultaneously in France. Presentation in June, **in Sardinia the production, in the Bolotana factory, which should churn out a thousand cars a year.** In short, given the previous doubts remain, but this time at least on paper would seem all in order, all almost ready for the revolution of sustainable mobility. But will it really be the right time?
